

STS AVIATION GROUP – NEW LOOK, NEW LOGO

A major re-branding has taken place at the **STS Aviation Group** and this new look can be seen at show booth 1309. The familiar red airplane that for years has been part of their logo is gone—replaced by a contemporary styled jet. “An image, which more accurately represents the way **STS** views the future of the aerospace industry,” according to company President, Philip J. Anson, Jr.

“We also felt the re-branding had to incorporate the tag line **Solutions To Keep You Flying**, not simply as a slogan, but as an explanation of the way we do business,” Anson said. “While some companies offer one select service, **STS** approaches the aerospace industry not on the basis of what we have to offer, but rather as a provider of the solutions our customers need. We work with clients to identify, solve and integrate alternative turnkey solutions to any problem—whether it involves staffing, engineering, line maintenance, component supply chain, or some as yet unknown challenge that lurks just beyond the bend in the road.”

Anson went on to say, “I’d like to invite attendees of the MRO to stop by our booth 1309 and take a look at the changes. I think they’ll be impressed, not simply with our new look, but with our expansive range of aerospace service capabilities.”

It’s obvious in everything from the unique convex set-up of their display to the futuristic look of the new logo; the **STS Aviation Group** is making a bold statement that they intend to remain at the forefront of the aerospace service industry.

Based in Jensen Beach, Florida, the **STS Aviation Group** is a diversified company that specializes in support services for the aerospace industry. Founded in 1985, the company began with a staffing service for skilled aircraft mechanics. Although staffing continues to be an important element in their service structure, they now provide a full range of engineering services through their virtual network as well as on-site placement, aircraft component and supply chain management, and line maintenance services for on the ground aircrafts. Since inception, the company has more than quadrupled its size and has expectations of continuing growth to meet the ever-increasing needs of the aerospace industry.
